

The WMS that ships what legacy platforms charge six figures for.

Route-aware voice picking, batched inter-warehouse settlement, directional freight matrices, cluster-fit auto-allocate, RF-gun-native operator console, live-FX localisation across 10 currencies.

CORE WAREHOUSE WORKFLOWS

- Multi-warehouse inventory with dynamic location schemas
- Waves + batches + single-order picks with scan-to-confirm
- Cluster-fit auto-allocate on inbound receipts
- Multi-UOM + fractional quantities per SKU
- Blind + ABC cycle counts, quick-count from any screen
- Dispatch with manifest / BOL PDFs + seal + photo evidence
- Full audit log on every mutation

SIGNATURE DIFFERENTIATORS

- Voice picking that speaks the destination on transfers
- Batched transfer settlement — one invoice, freight ONCE
- Directional freight matrix (WH-A→B ≠ WH-B→A)
- Auto rate-change history with cost-creep alerts
- Gamified Losses-Avoided-YTD counter (LinkedIn share)
- Container capacity forecast with over-cap banners
- Standalone Pallet Tracker tier + product-mode gates

Why teams switch to Stockaris

“Our pickers know exactly which truck their pick is going to — voice tells them before they walk to the rack.”

“We consolidate 40 same-route transfers into ONE invoice a month. Legacy WMS would have made us bill each one.”

“The freight rate history caught a 22% supplier increase before it hit our P&L. That paid for the platform.”
